

Tasker JT4-080-90 (26 Jul 90) SG1A

Target: S/V [REDACTED] 41 foot ketch, fiberglass, white hull, blue SS, two masts.

EEl:

1. What is its location?
2. What activity is it involved in?
3. Is it carrying contraband drugs?
4. Provide any additional information available.

P: 080

26 Jul 90

## Summary of to find

The target is ~~now~~ currently located at  $23^{\circ} 27' N$   $89^{\circ} 22' W$ . The vessel is concerned with evading detection. It is transporting narcotics, which are located in one of two areas. The key to finding the contraband is an area where metal shavings / filings occur. Sense that something has been injected into the center mast and that the mast is considered expendable. It is to be cut in half. The injected material is white and dense. ~~The mast area~~ If this is the location of the contraband, metal shavings are found around the <sup>deck</sup> base collar of the mast. The ~~search~~ area on the vessel is ~~associated~~ ~~located~~ in the rear ~~part~~ <sup>part of the</sup> side wall of this area has been packed by solid and dense <sup>heavy</sup> nylon bags in between the ~~st~~ struts or ribs. The section containing the packages is very solid. If this is the location, metal shavings will be found at the base of this specific wall section. Sense that a primary person (a man) on board is not aware ~~what is on board~~ of what the vessel is actually carrying. A [name] man in Harrisburg PA is associated with this target in some way.

\* An attempt had been made to clean up & remove all of the metal filings / shavings. However, remnants have worked themselves out in one of the two ~~at~~ spots.
